/aungmyopaing890 /aungmyo-paing aungmyopaing890@gmail.com

PROFESSIONAL SUMMARY

Experienced Mobile Developer with **4 years of hands-on expertise in Flutter**, delivering high-performance, user-centric **applications across both Android and iOS platforms**. Proven ability to build scalable, maintainable, and visually polished apps in fast-paced, collaborative environments. Complemented by a strong background in **Laravel**, enhancing backend integration and enabling efficient **full-stack collaboration**. Currently expanding capabilities in native **iOS development using Swift** and the Apple ecosystem, with a strong interest in mobile architecture best practices and modern development tools. Seeking opportunities to grow in a dynamic and innovative team, contribute to impactful products, and help drive technical excellence through **clean architecture, continuous learning, and creative problem-solving**.

MY SKILLS

Programming Languages : Dart, Swift, PHP, NodeJS, java, kotlin

Mobile Development : Flutter, Swift, kotlin

Backend Development : Laravel, Nodejs, Java

State Management : Provider, Riverpod, Bloc, GetX

Framework : Flutter, Laravel, Spring Boot

Database : SQLite, Firebase, MongoDB, MySQL

API Integration : RESTful APIs, GraphQL, WebSockets, Postman

UI/UX: Material Design, Responsive Design, SwiftUI, Jetpack Compose

Tools & Version Control: Git, GitHub, GitLab, Bitbucket

Testing & Debugging : Unit Testing, Integration Testing, Flutter Test, Mockito, Chrome DevTools, Android Studio Profiler, Xcode Instruments

Design Patterns : SOLID principles, Clean ,MVC, MVVM

Development Practices : Agile, Scrum, CI/CD pipelines,

Other Tools: Postman, VS Code, Android Studio, Xcode, JIRA, Slack, Notion

EXPERIENCES

11/2023 – Present

My Journey at JoyGroup International

During my time at JoyGroup International, I had the opportunity to work across multiple **large-scale projects** that served both domestic and international markets. As a **Senior Flutter Developer**, I was responsible for **architecting and building cross-platform mobile applications** that prioritized **performance, user experience, and maintainability**. I collaborated closely with **backend engineers, product teams, and QA** to deliver **feature-rich solutions** across various industries—including logistics, media, fintech, e-commerce, and customer support.

My journey was marked by **deep involvement in all stages of product development**—from **requirement analysis and architecture planning** to deployment and optimization. I leveraged modern Flutter technologies such as **Clean Architecture, Riverpod, Dio, Retrofit, GoRouter, and Flavor configurations** to ensure scalable and robust solutions. The following projects showcase my contributions across **diverse business domains** and technical challenges.

Project 1: State-of-the-Art Logistics App

Developed a **logistics app for cross-border transportation between China and Myanmar**, designed to cater to various user types. The project included the User App, Rider App, Main Counter (China) App, Other Counter (China) App, and Admin Site. **My primary responsibility was developing the User App**, focusing on its functionality and seamless user experience.

Responsibilities:

- **Communicated effectively** with other mobile developers, backend developers, and the admin site team to ensure **smooth integration**.
- Developed the User App using **Provider, Clean Architecture, Go Router**, and **HTTP** for API calls.
- **Integrated qr_code_scanner (^1.0.1)** to implement a barcode scanning feature for parcels from **random products or online shops**.

Implemented features:

- Submit and manage parcel addresses for delivery **from China to Myanmar**.
- Parcel tracking.
- **Real-time notifications** for parcel status updates.
- Delivery options based on user type (pickup or home delivery).

Challenges:

- Learning and **integrating the barcode scanner** package.
- Addressing cross-team communication to **handle dependencies** and **unexpected issues**.

App Store

Project 2: News Application

Worked collaboratively with another Flutter developer to build a news application that delivered both **global and local news content**, personalized by the user's selected country. The app featured **real-time categorization** into Breaking News, Hot News, and other relevant topics.

Responsibilities:

- **Developed core features** for delivering both **global and local news**, tailored to the user's **region** and **preferences**.
- **Implemented push notifications** for **breaking news alerts** and critical system updates to improve user engagement.
- Ensured smooth handling of **localized and international news feeds** with a strong focus on **performance, data consistency**, and real-time updates.

Technologies & Methodologies:

- **Flutter, Clean Architecture, Bloc** for state management
- **Dio with Retrofit Interceptors** for robust API communication
- Emphasized **modularity** and **code reusability** for long-term scalability

App Store

Project 3: Currency Rate Application

Aimed at users in **China**, this application was developed to enable real-time tracking of **currency exchange rates** and **cryptocurrency prices**. The platform also allowed **admins to manage custom categories such as Exchange Currency, Crypto, Rice**, and other goods and commodities—ensuring flexibility for a wide range of financial and trade use cases.

Responsibilities:

- Implemented **user authentication** using **Google** and **Apple Sign-In**.
- Built an **admin dashboard** to dynamically **manage exchange rates** and **cryptocurrency prices**.
- Integrated **system notifications** to alert users of market changes and app updates.
- Used **Syncfusion Flutter Charts** to develop interactive and informative data visualizations.
- Developed and maintained **robust API interactions** using **Dio**, with proper error handling and response validation.
- Built **scalable and reusable UI components** to deliver a responsive and intuitive user experience.

Technologies & Methodologies:

- **Flutter Flavors**: Managed multiple environments (development, staging, production) with ease and consistency.
- **Environment Variables**: Enabled **dynamic configuration**, improving deployment flexibility across builds.
- **Provider**: Used for **state management**, ensuring consistent UI updates and responsive state handling.
- **Clean Architecture**: Adopted to maintain **code scalability**, separation of concerns, and long-term maintainability.
- **Dio + Retrofit**: Used for efficient, scalable **API communication** with support for interceptors and error tracking.

Project 4: Music Application for DJs

Developed a **specialized music streaming and management app** tailored for **DJs**, enabling them to **seamlessly organize, queue, and play tracks** during both **live sessions** and **offline practice**. The application was built with a strong focus on **performance, real-time responsiveness**, and **user customization**, ensuring a smooth and professional-grade experience for DJ workflows.

Responsibilities:

- Implemented **playlist creation** and **track management features** tailored specifically for **DJ workflows**, allowing seamless organization and set preparation.
- Built a **high-performance audio player** with **waveform visualization**, enabling precise cueing and control.
- Supported both **offline and online playback modes**, accommodating various performance environments.
- Developed **theme customization**, including a **night/live** mode for enhanced visibility during stage performances.
- Engineered a robust **audio queue system** to ensure **smooth transitions** between tracks without latency.
- Focused on **real-time responsiveness** to enable fast **cueing, scrubbing, and mixing** interactions essential for live sets.
- Designed a **scalable architecture** capable of handling **future enhancements** and **plugin-style extensions** for advanced audio features.

Technologies & Methodologies:

- Utilized **Riverpod** for **efficient state management** and **real-time UI updates**, ensuring smooth user interaction throughout the app.
- Applied **Clean Architecture** to maintain a **modular design** and clear **separation of concerns**, supporting long-term maintainability and scalability.
- Integrated **Retrofit** with **Dio** to manage **RESTful API communication**, handling track metadata, playlist syncing, and user session data.
- Leveraged **Audio Service** and **Just Audio** packages to implement **advanced audio playback**, including **background handling, waveform control**, and precise track manipulation for professional DJ use.

Project 5: Customer Support Chat Application (Agent Side)

Developed a **centralized live chat solution** for **customer support agents** to manage conversations from all **products** across the company's ecosystem. The system was **integrated with every customer-facing project**, enabling **seamless and unified support** across mobile and web platforms, while enhancing communication efficiency and response time.

Responsibilities:

- **Real-time messaging** implemented using **WebSockets** for instant communication.
- Developed a **multi-project, multi-session chat interface** for agents to manage conversations across products.
- Integrated **notifications** for new messages, escalations, and agent/customer status changes.
- Built **agent presence and availability tracking** for smart routing and workload distribution.
- Designed a **scalable, multi-channel chat architecture** to support company-wide integration.
- Integrated with **user management and project-specific routing systems** for contextual support.
- **Optimized chat performance** to handle **high-volume concurrent users** efficiently.

Technologies & Methodologies:

- **Riverpod**: For **state management** and **reactive UI updates**.
- **Clean Architecture**: Maintained **separation of UI, logic, and data layers**.
- **Retrofit**: Handled **API communication** with customer and user-related services.
- **Socket.io**: Enabled **real-time bi-directional communication** for instant updates and interactions.

Project 6: E-commerce Application

Developed a **visually-rich shopping app** that delivers a **seamless buying experience**, featuring **product listings, cart, checkout, and order tracking**.

Responsibilities:

- Built **product browsing and filtering features** for easy navigation.
- Developed **add to cart, wishlist, and order management** functionality.
- Integrated a **secure checkout process** with **payment gateway support**.
- Delivered a **high-quality UI** with **smooth animations and transitions**.
- Implemented a **dynamic product catalog** and **search functionality**.
- Created **reusable UI components** for design consistency and performance.
- Integrated **order and payment APIs** with a focus on security and reliability.

Technologies & Methodologies:

- **Riverpod**: For scalable **state management** across the app.
- **Clean Architecture**: Ensured a **modular and testable codebase**.
- **Retrofit**: Used for **efficient API communication** with backend services.
- **Custom Design System**: Delivered a **pixel-perfect UI** aligned with modern design standards.

My Journey at App.com.mm - Senior Developer

As a **Senior Flutter Developer**, I led the development of multiple large-scale, production-ready mobile applications across domains such as **e-commerce, logistics, healthcare, education**, and live chat systems. I was responsible for **architecting frontend structures** using **Provider, Riverpod, Clean Architecture, Go Router**, and **Dio**, while ensuring clean separation of concerns, performance optimization, and maintainability.

- **Owning end-to-end delivery** of feature-rich Flutter apps, including **product catalog systems, real-time tracking, payment flows, QR/barcode scanning, and push notification integration**.
- **Collaborating cross-functionally** with backend developers, product managers, and UI/UX designers to align technical implementation with business goals.
- **Mentoring mid-level Flutter developers**, conducting code reviews, and enforcing best practices in architecture and modular development.
- Tackling domain-specific challenges such as **real-time gold pricing, dynamic inventory systems, offline access handling, and data synchronization across regions**.
- Maintaining a consistent design language across apps through **reusable UI components, custom design systems, and pixel-perfect implementations**.

Through these diverse projects, I delivered scalable and secure apps for users across Myanmar, focusing on **performance, trust-building UX, and clean, maintainable code**.

Project 1: KweeLa Min – Ecommerce App

Developed **KweeLa Min**, a **mobile ecommerce application** focused on selling **second-hand and brand-new laptops** to users in Myanmar. The app was designed to deliver a **clean, fast, and trustworthy shopping experience**, supporting **detailed product listings** and **real-time order tracking** to enhance user confidence and satisfaction.

Responsibilities:

- Built the **mobile frontend** using **Riverpod, Clean Architecture, Go Router**, and **Dio** for **scalable and maintainable development**.
- Designed **reusable components** for product listing cards, filters (by brand, condition, and price), product detail pages, and checkout.
- Implemented **secure user authentication, dynamic delivery address selection, and order history features**.
- **Collaborated with the backend team** to handle laptop inventory, user orders, and promotional discounts.

Implemented Features:

- **Browse and filter laptops** by condition (brand-new or second-hand), brand, specs, and price.
- Product detail pages with high-quality images, condition notes, and spec breakdowns.
- **Cart and checkout system** with **address management** and **payment flow**.
- Users receive real-time updates through an **order tracking and notification system** to stay informed on their delivery status.
- **Barcode scanning support** (using `qr_code_scanner`) was integrated to enable sellers to **quickly list or verify laptops**, streamlining inventory management.

Challenges:

- Creating trust in **second-hand product listings** through **clear condition tagging** and image requirements.
- Managed product **data with varying specifications and conditions**, ensuring consistency and accuracy across listings.
- Designed a **UI/UX flow** that effectively supports both **tech-savvy buyers** and general users, balancing functionality with simplicity to enhance usability for a broad audience.

Project 2: BinaryComputerStore – for Computers & Accessories

Developed **BinaryComputerStore**, a **mobile ecommerce application** specializing in the sale of **brand-new and second-hand computers, laptops, and tech accessories**. The app was designed to support **detailed product discovery, side-by-side product comparison**, and a **smooth checkout experience** tailored for both **tech enthusiasts** and **general buyers** in Myanmar.

Responsibilities:

- **Engineered the mobile frontend** using **Riverpod, Clean Architecture, Go Router**, and **Dio** to ensure a **scalable architecture** and **clean code separation**.
- Built **UI components** for **category navigation, product comparison, and spec-based filtering** to enhance user experience..
- Integrated **dynamic product inventory** with **admin-defined pricing** and **discount logic**, allowing flexible promotions and real-time updates.
- Developed features for **user registration, cart management, and multi-address delivery support**, enabling a seamless and personalized shopping flow.

• [AppStore](#)

• [AppStore](#)

- [AppStore](#)

Implemented Features:

- Implemented **category-based browsing** for **laptops, desktops, parts, peripherals, and accessories**, enabling users to easily explore a wide range of products.
- Added **advanced filters** for technical specifications such as **processor type, RAM, storage, and GPU** to support power users in finding the right device.
- Developed a **product comparison tool** that allows users to **evaluate multiple devices side-by-side**, aiding in more informed purchasing decisions.
- Built a full **cart and secure checkout system** with **address book integration** and **multiple delivery methods**.
- Enabled users to track their purchases through a detailed **order history** and **real-time delivery tracking** feature.

Challenges:

- Faced the challenge of **structuring flexible product data models** to handle a wide range of **specifications and categories** while ensuring scalability for future product additions.
- Worked on **implementing a consistent user experience** across different product types, ensuring a seamless flow regardless of product complexity.
- Addressed the need for **managing stock visibility** and handling **pricing differences** between **new and second-hand items**, ensuring that both were represented clearly and accurately within the app.

Project 3: ShwePyaePhyo - Ecommerce App for Gold & Jewellery

Developed **ShwePyaePhyo**, a **mobile ecommerce application** tailored for **buying and browsing gold and jewelry products**. The platform was designed to serve **Myanmar customers** with **trusted pricing, detailed product visuals**, and **secure order handling** for high-value, luxury items.

Responsibilities:

- **Gold and jewelry catalog** featuring **high-resolution images** and **detailed specifications** such as karat, weight, and type.
- **Real-time gold price display** with **automatic price adjustment** for each product based on market rates.
- **Wishlist and inquiry system** to **enable personalized engagement** with high-value luxury items.
- **Secure checkout** supporting both **home delivery and in-store pickup** options.
- **Customer support integration** directly within product and order screens for fast assistance.

Implemented Features:

- Developed a **rich product catalog** showcasing gold and jewelry items with **high-resolution images** and **detailed specifications** such as karat value, weight, and type.
- Integrated a **real-time gold pricing system** that dynamically adjusts product prices based on the current market rate.
- Enabled a **wishlist and product inquiry feature** to support personalized engagement and high-involvement purchasing decisions.
- Built a **secure and flexible checkout process**, allowing users to choose between **home delivery** and **in-store pickup** options.
- Embedded **customer support access** directly within product and order views, improving user trust and support response efficiency.

Challenges:

- Ensured accurate pricing tied to **daily gold rate fluctuations**.
- Designed a **luxurious, trustworthy UI** for high-value transactions.
- Secured **personal and payment data** to build customer trust.
- Optimized **image-heavy UI** for performance without compromising quality.
- Handled **localization** for Myanmar language and formats.
- Managed **real-time inventory and pricing updates**.
- Implemented **spam-safe inquiry forms** with user-friendly validation.

- [AppStore](#)

Project 4: Wisdom Tree Library - Digital Library App

Developed **Wisdom Tree Library**, a mobile application designed to give users access to a wide collection of **books, journals, and educational materials**. The app supports both **digital reading** and **physical book reservations**, along with **personalized book tracking** features tailored for students and lifelong learners.

Responsibilities:

- Built the **mobile frontend** using **Provider, Clean Architecture, Go Router, and Dio** to ensure **maintainability and scalability**.
- Designed and implemented **UI components** for **book listings, search, filters, and category-based navigation** to enhance user experience.
- Integrated **QR code-based check-in/check-out** functionality and **user-specific borrowing history tracking**.
- Collaborated with the **backend team** to sync **book availability**, manage **borrow limits**, and support **user authentication** for secure access.

- [AppStore](#)

Implemented Features:

- **Search and browse** digital library content by **title, author, category, and language**.
- **Borrow and reserve** system for both **physical and digital books**, including **return tracking**.
- **QR code scanning** for fast **check-in/check-out** and **location tagging** within physical libraries.
- **Reading history and bookmarks** with support for **personal reading goals and reminders**.
- **Admin panel integration** for **inventory management** and **user access control**.

Challenges:

- Designed an **intuitive interface** suitable for both **academic users and casual readers**.
- Ensured **real-time synchronization** of **book availability** and **user activity** across devices.
- Managed **offline access** and implemented **caching strategies** for smooth reading experiences without connectivity.

Project 5: Royal Collection – Cosmetics Ecommerce App

Developed **Royal Collection**, a **mobile ecommerce application** focused on selling a curated range of **cosmetics, skincare, and beauty products**. The app delivers a **premium shopping experience** for users in Myanmar, featuring **detailed product visuals, brand filtering, and fast, secure checkout** options.

Responsibilities:

- Designed and developed the frontend using **Riverpod, Clean Architecture, Go Router, and Dio** for structured development and smooth API communication.
- Created **visually engaging UI components** to highlight product quality, skin compatibility, and user reviews.
- Implemented **smart search, brand filtering, and personalized product recommendations**.
- Collaborated with backend developers to manage **product inventory, promotional logic, and order history**.

Implemented Features:

- **Product catalog** with skincare, makeup, fragrance, and personal care items, featuring **high-quality images and ingredient highlights**.
- **Filter and search** by brand, product type, category, and skin type.
- **Promotions and bundle offers** with real-time **stock updates**.
- **Customer reviews and ratings** displayed on product detail pages.
- **Fast and secure checkout** with support for **multiple delivery addresses** and **varied payment methods**.

Challenges:

- Designing a **visually elegant and trustworthy UI** tailored to **beauty-conscious consumers**.
- Handling **diverse product data**, including ingredient lists, skin types, and shade compatibility.
- Ensuring **smooth app performance** and minimal load time **despite media-heavy content**.

- [AppStore](#)

Project 6: Shwe Phone Shein – Gold & Jewellery Ecommerce App

Built **Shwe Phone Shein**, a **premium ecommerce mobile app** specializing in **gold and jewelry products** for the Myanmar market. The platform focuses on showcasing high-value items with **trusted pricing, elegant presentation, and smooth user experience**.

Responsibilities:

- **Architected the core structure** using **Riverpod** for state management and implemented **default routing** with **Go Router** to handle both authenticated and guest user flows.
- Designed and built **reusable widgets** for product cards, karat filters, price-weight calculators, and a secure checkout process.
- **Mentored mid-level Flutter developers**, providing guidance on **Clean Architecture, code reviews, and Dio-based API integration**.
- Led backend collaboration to define **API contracts** and ensured **accurate gold price calculations** across all modules.

Implemented Features:

- **Real-time gold pricing** logic based on **karat and weight**.
- **Detailed product views** with zoomable images, karat values, and certificate details.
- **Secure checkout system** with options for **home delivery or showroom pickup**.
- **Wishlist and inquiry forms** for customer engagement on high-value items.
- **Role-based routing** and **guarded routes** implemented via **Go Router**.

Challenges:

- Managing **precise gold price calculations** based on fluctuating market rates.
- Designing a **trust-building UI/UX** tailored for high-value online transactions.
- **Mentoring developers** to align with best practices in **large-scale Flutter architecture**.

- [AppStore](#)

Project 7: Prim Decant - Fragrance Decant Ecommerce App

Developed **Prim Decant**, a mobile ecommerce application focused on selling **fragrance decants**—smaller portions of premium perfumes—designed to make **luxury scents more affordable and accessible** to fragrance enthusiasts in Myanmar.

Responsibilities:

- Built the frontend using **Provider, Clean Architecture, Go Router**, and **Dio**, ensuring clean separation of concerns and a scalable codebase.
- Designed and implemented **visually rich UI components** to display **decant sizes, scent profiles**, and **brand details**.
- Integrated **cart, wishlist, and secure checkout flows** with backend systems for real-time order and inventory synchronization.
- Collaborated with product owners to define **scent categories** (e.g., woody, floral, citrus) and **brand filters** for enhanced product discoverability.

Implemented Features:

- **Fragrance catalog** with **high-resolution bottle images**, available in various **decant sizes** (e.g., 2ml, 5ml, 10ml) and detailed scent breakdowns (top/mid/base notes).
- **Advanced search** and **filtering by brand**, scent family, and intensity.
- Support for **wishlist, cart**, and **secure checkout**, with **real-time stock updates**.
- Display of **customer reviews** and **scent experience notes** to aid buyer decisions.
- **Educational content section** introducing users to **fragrance layering** and the concept of **decanting**.

Challenges:

- Capturing a **luxury and sensory experience** through visuals and copy in a mobile interface.
- Handling **complex inventory management** tied to **variable decant volumes** instead of full-sized products.
- Balancing **performance and responsiveness** with **media-heavy** content, including high-resolution images and user-generated reviews.

Project 8: JMAK - Korea to Myanmar Logistics App

Developed **JMAK**, a **mobile logistics platform** designed to streamline and track **cross-border shipments** from **Korea to Myanmar**. The app serves both individual customers and small businesses with features for **delivery coordination, package tracking**, and **customs management**.

Responsibilities:

- Built the mobile frontend using **Provider, Clean Architecture, Go Router**, and **Dio**, maintaining a scalable and clean codebase across multiple shipment flows.
- Designed and implemented key logistics features such as **shipment request creation, payment integration, transfer proof upload**, and **real-time status tracking**.
- Integrated **barcode scanning** and **camera capture** to enable **physical package verification** and **transfer proof** submission.
- Collaborated with the backend team to align and implement shipment tracking stages including: **Pending → Accepted → Transfer Notified → In Transit → Delivered**.

Implemented Features:

- **Shipment request** form capturing sender/receiver details, **item declarations**, and **package photos**.
- **Real-time tracking** system with **status updates** and **estimated delivery timelines**.
- **Proof of transfer** upload with support for image capture and **file compression**.
- **Push notifications** for key logistics events like pickup, customs clearance, and final delivery.
- **Multi-language** support for both **Korean and Burmese users** to improve accessibility and engagement.

Challenges:

- Ensured data **reliability and synchronization** across different **time zones** and **logistics checkpoints**.
- Handled **inconsistent or incomplete address** formats between Korea and Myanmar regions.
- Focused on **building user trust** through **transparent tracking workflows** and clear **proof-of-transfer handling**.

Project 9: SayTaught Mal - Doctor-Prescribed Medicine App

Developed **SayTaught Mal**, a mobile application designed to help users in Myanmar access **doctor-prescribed medicines**, receive **health advice**, and manage **follow-up care** in a secure, user-friendly platform. The app serves as a digital bridge between **doctors, pharmacies**, and **patients** to ensure **efficient and trustworthy medical access**.

- AppStore

Responsibilities:

- Designed and developed the mobile frontend using **Riverpod**, **Clean Architecture**, **Go Router**, and **Dio** for **responsive and scalable architecture**.
- Built secure flows for **uploading prescriptions**, **medicine ordering**, and **doctor consultation tracking**.
- Collaborated with medical professionals to structure **drug categories**, **dosage instructions**, and **follow-up reminders**.
- Integrated backend features for **local pharmacy fulfillment** and **delivery scheduling**, enabling smooth medicine distribution.

Implemented Features:

- **Prescription upload** with image compression and doctor verification.
- **Medicine search and order** by name, symptom, or category.
- **Doctor's note viewer** displaying dosage instructions, timing, and medical guidance.
- **Follow-up reminder system** with push notifications for scheduled care.
- **Pharmacy integration** for **real-time inventory**, **availability**, and **delivery coordination**.

Challenges:

- Ensuring security and **privacy of sensitive medical data** and **prescriptions**.
- Designing an **intuitive UX** suitable for both **tech-savvy users** and **elderly patients** with varying digital literacy.

Project 10: Kira Kira - Toy Ecommerce App

Developed **Kira Kira**, a vibrant and engaging mobile ecommerce application focused on selling toys and educational products for children in Myanmar. The app is designed to deliver a joyful and secure shopping experience for parents and gift buyers.

Responsibilities:

- Built the mobile frontend using **GetX**, **Clean Architecture**, **Go Router**, and **Dio** to ensure clean code structure and seamless performance.
- Designed playful yet **intuitive UI components** tailored for showcasing toy categories, age recommendations, and product previews.
- Integrated **cart**, **wishlist**, and **checkout flows** with **dynamic pricing**, **offers**, and **delivery tracking**.
- Collaborated with the content and backend teams to **manage product catalog**, **categories** (e.g., age, type, theme), and **secure payments**.

Implemented Features:

- **Toy catalog organized** by age group, brand, and educational value.
- **Detailed product pages** with videos, images, safety instructions, and ratings.
- **Smart search and filters** for age, category, price, and brand.
- **Wishlist and gift** suggestion features for birthdays and events.
- **Order tracking** with notifications and delivery timeline.

Challenges:

- Designed a **fun and colorful interface** that maintained clarity and usability without overwhelming the user.
- Handled **diverse product data**, including variations in **size**, **usage type**, and **age suitability** across toy categories.
- Ensured a **secure and seamless checkout experience** tailored for **parents and gift buyers**, prioritizing ease of use and trust.

9/2022 - 4/2023

My Journey at PanaceaSoft - Junior Developer

Worked on a **large-scale, feature-rich e-commerce platform** supporting buyer-seller communication, product listings, and real-time chat functionality. Contributed to building a **scalable and maintainable architecture**, ensuring long-term platform stability. Collaborated with **international clients**, especially through platforms like CodeCanyon, and handled professional communication effectively to address feedback and improve satisfaction. Actively participated in **cross-functional collaboration** with backend, frontend, QA, and design teams, leveraging **agile methodologies** for sprint planning, task breakdown, and issue resolution.

Ensured optimal performance and compatibility by upgrading applications to the latest Flutter and Dart versions, while maintaining clean, modular, and reusable code. Implemented key features such as Google, Facebook, and Apple authentication, REST API integration, local storage handling, and real-time state management using Provider. Enhanced application speed by optimizing widget rebuilds and resolving performance bottlenecks, which significantly improved UX and load times.

Applied **scalable design patterns** like **MVVM** and **Repository Pattern** and adopted **dependency injection** for modular and testable code. Gained hands-on experience across the **full software development lifecycle**—from planning and development to debugging, deployment, and maintenance. Tackled **complex technical challenges**, including integration issues and architecture-level concerns, under tight deadlines. Demonstrated a commitment to continuous learning, acquiring advanced Flutter skills and best practices through code reviews, mentorship, and architecture reviews from senior developers.

- [codecanyon](#)

Project 1: PSX Multi-Purpose Classified - Ecommerce & Classifieds App

Developed **PSX Multi-Purpose Classified**, a versatile ecommerce and classifieds mobile application designed for listing and selling a wide range of products and services. The app was built to be scalable, customizable, and production-ready for sale on **CodeCanyon**, targeting global buyers seeking a feature-rich Flutter solution.

Responsibilities:

- Worked collaboratively in a **team of four Flutter developers**, contributing to both architecture and feature development.
- Implemented **Provider for state management** and **Clean Architecture**, ensuring responsive UI updates and clean separation of business logic.
- Utilized **Flutter's default router** to manage dynamic navigation flows across buyer, seller, and admin views.
- Built reusable and configurable components for listing creation, product browsing, user authentication, and order management.

Key Highlights:

- Designed with a focus on **reusability and flexibility**, making it suitable for various niches (e.g., real estate, vehicles, services).
- Developed with the intent to **publish and monetize the app template on CodeCanyon**, adhering to marketplace quality and scalability standards.
- Integrated core ecommerce features such as product categorization, search and filter, cart, checkout, and admin moderation tools.

Challenges:

- Balancing customization with simplicity to ensure buyers can easily adapt the template for different business use cases.
- Maintaining clean and scalable code structure while working collaboratively across multiple modules and contributors.

Project 2: Flutter Multi-Restaurant App - Food Delivery Platform

Developed a **Flutter Multi-Restaurant App**, a comprehensive food delivery platform with dedicated apps for **Users, Riders, and Restaurants**. The project aimed to support real-time order placement, delivery tracking, and restaurant management, offering a scalable solution for multi-vendor food services.

Responsibilities:

- Designed and developed separate flows for **User, Rider, and Restaurant roles**, each with customized features and UI components.
- Structured the project using **Provider for state management** and **Clean Architecture** to ensure modularity, testability, and maintainability.
- Focused on building a highly configurable system with dynamic menus, order lifecycle updates, and secure authentication.

Implemented Features:

- Implemented **order tracking and status updates** between user, restaurant, and rider in real-time.
- Developed **restaurant dashboards** with order management, product listings, and availability toggles.
- Integrated **delivery logic** for riders with pickup/drop-off tracking and route management.

Challenges:

- The project required a significant development timeline due to the **complexity of managing three distinct user flows** and synchronizing interactions between them.
- Ensuring **scalability and performance** while maintaining clean code separation and reusability across the modules.

4/2021 - 8/2022

My Journey at TechPlusSolutions - Intern - Junior Developer

At TechPlusSolutions, I gained hands-on experience across the **entire application development life cycle**, from requirements gathering and sprint planning to deployment and maintenance. I applied **Agile methodologies** with iterative development and sprint cycles, becoming familiar with the flow of real-world production environments.

I worked extensively on **Flutter project structures**, organizing code using feature-based and layer-based approaches for better scalability. I implemented robust **design architecture** using **MVVM** and **Clean Architecture principles**, while managing app state with tools like **Provider**, **Riverpod**, and **GetX**. My work emphasized **code separation, dependency injection, and testability** for long-term maintainability.

In collaboration with the team, I used **Git** for version control and participated in pull requests and branching strategies. I regularly worked with **GitHub**, **Jira**, and **Slack** for task tracking and communication. For debugging and error handling, I utilized **Flutter DevTools**, **Crashlytics**, and implemented **user-friendly error reporting** using try-catch and custom handlers.

My responsibilities included **state management**, widget tree optimization, and performance tuning through rebuild minimization and integration testing. I planned navigation flows and UI state using **Figma/Adobe XD** and contributed to testing strategies and bug fixing during the QA phase. I implemented **REST API integration** using **Dio**, managed data persistence with **SQLite** and **SharedPreferences**, and configured **App Store/Google Play deployment**.

Lastly, I handled package management using `pubspec.yaml`, integrating dependencies like **Dio**, **GetX**, and **intl**. My contributions covered **cross-platform app development**, targeting both Android and iOS, giving me a strong foundation in scalable Flutter development.

• [AppStore](#)

Project 1: Sanzarnibo - Astrology & BayDin App

Developed Sanzarnibo, a culturally-rooted astrology and BayDin mobile application designed for users in Myanmar. The app delivers daily horoscopes, traditional fortune readings, and astrological insights based on local beliefs, lunar calendars, and Myanmar zodiac systems.

Responsibilities:

- Built the mobile frontend using **Flutter**, applying **Riverpod** for efficient state management and **Clean Architecture** for a scalable and maintainable codebase.
- Designed intuitive UI screens for horoscope selection, BayDin result display, and weekly spiritual guidance.
- Integrated traditional Myanmar calendar logic, including **lunar dates** and **planetary alignments**, while supporting full **Myanmar language localization**.
- Implemented **secure local storage** to save user profiles, birth details, and reading history.

Implemented Features:

- **Daily and weekly horoscopes**, personalized based on date of birth and traditional zodiac signs.
- **BayDin readings** generated from name and birth date, using culturally accurate astrological formulas.
- **Bookmarking** and **history tracking** for previously viewed horoscopes and spiritual advice.
- An **in-app Myanmar calendar** with favorable days, planetary events, and reminder notifications.
- Support for **dark mode** and **accessibility features** to ensure an inclusive user experience.

Challenges:

- Translating traditional astrology systems into **accurate, algorithm-driven outputs**.
- Ensuring **cultural accuracy** and sensitivity while maintaining a modern user interface.
- Supporting **complex Myanmar date systems** and multiple font encodings across devices.

Mentorship:

- This project was developed under the guidance of a senior developer, who provided direction on architecture, performance optimization, and best practices for handling culturally sensitive content.

Project 2: MG Driving Training School - Training & Booking App

Developed **MG Diving Training School**, a mobile application designed to streamline **diving course enrollment, schedule management, and certification tracking** for a professional diving school. The app serves both students and instructors, offering course information, booking functionality, and digital learning resources.

Responsibilities:

- Built the frontend using Flutter, utilizing **GetX for state management** and **Clean Architecture** for scalable code separation.
- Designed intuitive UI components for course browsing, registration, class schedules, and progress tracking.
- Integrated calendar-based scheduling and real-time seat availability for upcoming diving sessions.
- Worked closely with instructors and admins to align app features with real-world diving school operations.

Implemented Features:

- **Course catalog** with detailed descriptions, instructor profiles, requirements, and pricing.
- **Online booking system** for reserving seats in training sessions, with confirmation and reminders.
- **Push notifications for class reminders**, safety guidelines, and announcements.

Challenges:

- Synchronizing class schedules and availability in real time to avoid overbooking.
- Creating a clean and informative UI for technical diving information and safety details.
- Supporting flexible workflows for both beginner and advanced diving courses.

EDUCATION

2019 - 2020

- KMD, Greenwich
- B.Sc. (Hons) computing
